# Annual Drinking Water Quality Report Sellersburg Water Department

PWSID#5210010

We are pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells located along the north banks of the Ohio River.

We have a wellhead protection plan available from our office that provides more information, such as potential sources of contamination.

I'm pleased to report that our drinking water is safe and meets federal and state requirements; This report shows our water quality and what it means.

If you have any questions about this report or concerning your water utility, please contact Shannon Starnes at 502-376-4517. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the  $2^{nd}$  and  $4^{th}$  Monday of each month, beginning at 6:00 p.m. at the Town Hall, 316 East Utica Street.

Sellersburg Water Department routinely monitors for constituents in your drinking water according to Federal and State laws. This table shows the results of our monitoring for the period of January 1<sup>st</sup> to December 31<sup>st</sup>, 2022. As water travels over the land or underground, it can pick up substances or contaminants such as microbes, inorganic and organic chemicals, and radioactive substances. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily pose a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we have provided the following definitions:

#### Lead and Copper

Definitions:

Action Level Goal (ALG): The level of a contaminant in drinking water below which there is no known or expected risk to health. ALGs allow for a margin of safety. Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. We are responsible for providing high quality drinking water, but we cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

| Lead and Copper | Date Sampled | MCLG | Action Level (AL) | 90th Percentile | # Sites Over AL | Units | Violation | Likely Source of Contamination   |
|-----------------|--------------|------|-------------------|-----------------|-----------------|-------|-----------|--|
| Copper          | 2022         | 1.3  | 1.3               | 0.413           | 0               | ppm   |           | Erosion of natural deposits; Leaching from wood<br>preservatives; Corrosion of household plumbing<br>systems |

#### Water Quality Test Results

| Definitions:                                       | The following tables contain scientific terms and measures, some of which may require explanation.   |
|--|--|
| Avg:   | Regulatory compliance with some MCLs are based on running annual average of monthly samples.   |
| Maximum Contaminant Level or MCL:                  | The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.  |
| Level 1 Assessment:                                | A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.  |
| Maximum Contaminant Level Goal or MCLG:            | The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.   |
| Level 2 Assessment:                                | A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions. |
| Maximum residual disinfectant level or MRDL:       | The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.  |
| Maximum residual disinfectant level goal or MRDLG: | The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.   |

## Water Quality Test Results

| na:                        | not applicable.   |
|----------------------------|---|
| mrem:                      | millirems per year (a measure of radiation absorbed by the body)                        |
| ppb:                       | micrograms per liter or parts per billion - or one ounce in 7,350,000 gallons of water. |
| ppm:                       | milligrams per liter or parts per million - or one ounce in 7,350 gallons of water.     |
| Treatment Technique or TT: | A required process intended to reduce the level of a contaminant in drinking water.     |
|                            |   |

### **Regulated Contaminants**

| Disinfectants and Disinfection<br>By-Products | Collection Date | Highest Level<br>Detected | Range of Levels<br>Detected | MCLG                     | MCL      | Units   | Violation | Likely Source of Contamination   |
|---|-----------------|---------------------------|-----------------------------|--------------------------|----------|---------|-----------|--|
| Chlorine                                      | 2022            | 1                         | 1 - 1                       | MRDLG = 4                | MRDL = 4 | ppm     | N         | Water additive used to control microbes.   |
| Haloacetic Acids (HAA5)                       | 2022            | 8                         | 6.3 - 9.1                   | No goal for the<br>total | 60       | ppb     | N         | By-product of drinking water disinfection.   |
| Total Trihalomethanes (TTHM)                  | 2022            | 24                        | 18.3 - 29.9                 | No goal for the<br>total | 80       | ppb     | N         | By-product of drinking water disinfection.   |
| Inorganic Contaminants                        | Collection Date | Highest Level<br>Detected | Range of Levels<br>Detected | MCLG                     | MCL      | Units   | Violation | Likely Source of Contamination   |
| Barium  | 2022            | 0.036                     | 0.036 - 0.036               | 2                        | 2        | ppm     | N         | Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits.                                |
| Fluoride                                      | 2022            | 0.53                      | 0.53 - 0.53                 | 4                        | 4.0      | ppm     | N         | Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories. |
| Nitrate [measured as Nitrogen]                | 2022            | 0.26                      | 0.26 - 0.26                 | 10                       | 10       | ppm     | N         | Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits.                               |
| Radioactive Contaminants                      | Collection Date | Highest Level<br>Detected | Range of Levels<br>Detected | MCLG                     | MCL      | Units   | Violation | Likely Source of Contamination   |
| Beta/photon emitters                          | 08/14/2017      | 5.4                       | 5.4 - 5.4                   | 0                        | 4        | mrem/yr | N         | Decay of natural and man-made deposits.  |
| Combined Radium 226/228                       | 03/20/2017      | 0.09                      | 0.09 - 0.09                 | 0                        | 5        | pCi/L   | N         | Erosion of natural deposits.   |
| Gross alpha excluding radon<br>and uranium    | 09/09/2020      | 1.5                       | 1.5 - 1.5                   | 0                        | 15       | pCi/L   | N         | Erosion of natural deposits.   |
| Uranium                                       | 08/14/2017      | 0.2399                    | 0.2399 - 0.2399             | 0                        | 30       | ug/l    | N         | Erosion of natural deposits.   |
| I   |                 | •                         |                             | •                        |          |         | •         | •  |
